Horizon plan summary

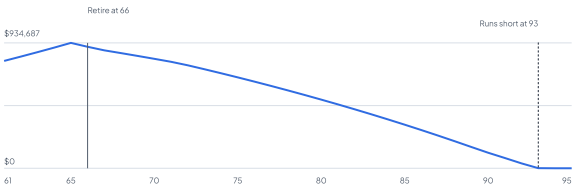

Example household · Single, 61, still working, plans to retire at 66 · figures as of 1 January 2026 · amounts in today's dollars

Answers

Savings run short at 93, two years before the plan ends.

To make them last to 95, spend $64,994 a year instead of $67,000.

What moves it most: investment returns, then spending, then the retirement date.

Savings by age, in today's dollars.

Ways to make your savings last

Each is one change, worked out by Horizon from your figures. They are options to explore, not advice.

Spend $64,994 a year in retirement

✓ Savings last to 95. That's $2,006 a year less than the $67,000 you plan.

Retire a year later, at 67

✓ Savings last to 95, with $1,616 a year to spare.

What you can't choose: investment returns

- If returns were 4% a year instead of 5%: savings run short at 88.
- If returns were 6% a year instead of 5%: savings last to 95, with $4,743 a year to spare.

Your money this year

In 2026, income of $85,000 covers spending of $62,000 and $9,958 of federal tax, and $13,042 left over is added to savings.

Plans you tried

Measure	Your plan	Spend $64,994 a year	Retire at 67	Returns at 4%
Savings	run short at 93	last to 95	last to 95	run short at 88
Most you could spend a year	$64,994	$64,994	$68,616	$58,658
Against your planned spending a year	$2,006 short	exactly enough	$1,616 to spare	$8,342 short
Left at 95	less than $1	$982	$75,045	$0

Amounts are in today's dollars (2026 dollars). Each copy is one change to your plan.
